

You lose the first hour *rebuilding Friday.*

The code is still there. The model in your head
is not.

That tax repeats *every gap*.

After the day job. After three days away.

Reconstruction produces nothing, and you pay it again.

Thursday reopened *Tuesday's call.*

Postgres, again. The ruling lived in your head, so Thursday had to invent it from scratch.

Good intentions don't work.
Mechanisms do.

AN OLD ADAGE AT AMAZON

For one person, a mechanism is a *file*.

End of session: the next action, with a path. Next session starts there. Two minutes, not ninety.

The midnight voice *has more stamina.*

Both parties are you. There is no one to escalate to. Writing the decision down is what ends the argument.

01 **RESUME.md**

where you stopped — overwritten every session

02 **DECISIONS.md**

what you ruled out, so Thursday cannot reopen Tuesday

03 **BAR.md**

what "done" means, written before you are attached

INSTALL

```
$ npx skills add akashp1712/skills --skill day-job-founder
```

On first use it writes the files. It does not lecture.
